IRO #: 5251

___ has been certified by the Texas Department of Insurance as an Independent Review Organization. The Texas Worker's Compensation Commission has assigned this case to ___ for independent review in accordance with TWCC Rule 133.308 which allows for medical dispute resolution by an IRO.

___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, all relevant medical records and documentation utilized to make the adverse determination, along with any documentation and written information submitted, was reviewed.

The independent review was performed by a matched peer with the treating doctor. This case was reviewed by a licensed Medical Doctor with a specialty and board certification in Orthopaedic Surgery. The ___ health care professional has signed a certification statement stating that no known conflicts of interest exist between the reviewer and any of the treating doctors or providers or any of the doctors or providers who reviewed the case for a determination prior to the referral to ___ for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to the dispute.

CLINICAL HISTORY

___ is a 44-year-old employee of ___ who developed symptoms of bilateral carpal tunnel syndrome in ___. She had surgery on both wrists for carpal tunnel release. There was no specific injury ever reported to the neck included in the records that were provided for review. She had several electrodiagnostic studies in her arms and they were reportedly positive for carpal tunnel syndrome, but did not show evidence of cervical radiculopathy. She had an MRI on May 15, 2002 because of continuing symptoms of pain radiating into her arms. This MRI was basically reported to be negative except for bulging of the discs at C5/6 and C6/7, which is an expected finding in 44-year-old individuals. The patient never demonstrated any neurological deficit suggestive of cervical radiculopathy.

REQUESTED SERVICE

A cervical discogram CT scan is requested for this patient.

DECISION

The reviewer agrees with the prior adverse determination.

BASIS FOR THE DECISION

There is no significant abnormality described on any imaging study. There is no EMG evidence or cervical radiculopathy. There is no indication or need for cervical spine surgery in the records provided for review. Cervical discography can locate a painful disc on pressurization, but the

clinical use of this data has not been established. The reviewer agrees with the carrier that the discogram with CT is not indicated at this time for this patient.

___ has performed an independent review solely to determine the medical necessity of the health services that are the subject of the review. ___ has made no determinations regarding benefits available under the injured employee's policy.

As an officer of ___, I certify that there is no known conflict between the reviewer, ___ and/or any officer/employee of the IRO with any person or entity that is a party to the dispute.

___ is forwarding by mail and, in the case of time sensitive matters by facsimile, a copy of this finding to the treating doctor, payor and/or URA, patient and the TWCC.

Sincerely,
